Wisenet Viewer is seamlessly compatible with Hanwha Techwin's NVR and DVR (SUNAPI v2.3.1 or later). Whether you've got network cameras or analog cameras, Wisenet Viewer enables you to monitor your sites in easy and simple ways. AI Search is also supported if you have NVRs equipped with AI search. Wisenet Viewer is costless yet powerfully helps you monitor and retain your site safe with essential features.
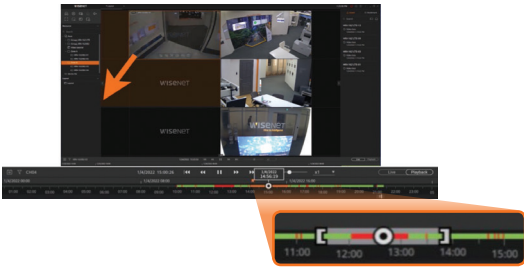

Start set-up immediately with Auto Registration

Simple to use, easy to set up even if you are not an experienced programmer.
Simply log in and access all your Wisenet NVRs and DVRs in one simple click.

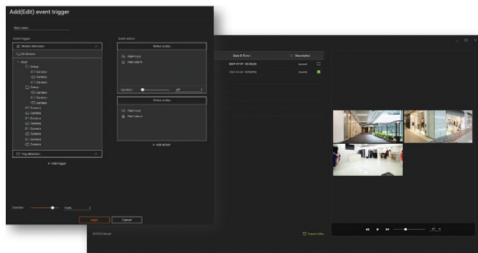

Designed for user convenience – Flexible channel layout & Timeline

Monitoring gets simple and easy with the support of intuitive
UX/UI allowing flexible channel grouping and custom layout.
With a mouse, users can easily zoom in/out and adjust the tile size.
Another convenient feature is autofit: with just one click, you can
see the tile in full screen. User can set bookmark on recorded video.
In addition users can bring up any video of interest and create
a personalized layout then save it for later use.

Get noticed when you need to – Event-Action Rule Management

Event-Action rule management plays a monitoring assistant role.
Users can set a certain event as a trigger for a certain action
followed. For example, if a MD(Motion Detection) event is detected,
an alarm will be automatically sent out. This significantly helps users
reduce resources used for monitoring.

Easy monitoring – Fisheye Dewarping

Fisheye Camera is appropriate for monitoring a space with just one camera by minimizing blind spots. Wisenet Viewer allows
you to view 360 degrees fisheye live and also dewarp the fisheye footage into single, panoramic, and quad view for more
correct monitoring.

View Mode
① Single View
② PPanorimic View
③ Quad View

Intelligent & effective monitoring powered by AI Search

Users can search AI events with various attributes obtained from AI cameras with Wisenet NVRs supporting AI search.
Moreover you can easily search a specific object by image in Wisenet Viewer offering bestshot feature. This would reduce
significant amount of time and energy.
